CAREGIVER TRAINING IN ABA

Incorporating acceptance and commitment training into clinical practice involves identifying appropriate ways to communicate with parents about the acceptance and acknowledgement of their child's diagnostic symptoms, then committing to caregiver carryover practices to train a new pattern of behaviors.

Healthcare providers may receive educational training to support caregivers using behavior analytic training methods from Sindy Victor, MS, BCBA, LBA. Send an email to build@swarthyion.com (Subject: Caregiver Training For Practitioners) and schedule a Behavioral Health Consultation today!
